POWER BI PROJECT

SALES ANALYSIS

A data-driven analysis of our sales performance, customers, products, and operations to uncover insights, identify opportunities, and drive better business decisions.

PROJECT DESCRIPTION

This project analyzes sales data across multiple dimensions to understand performance, identify key drivers, and provide actionable insights that support growth and profitability.

PROJECT OBJECTIVE

- Analyze overall sales performance over time
- Identify top-performing markets and customer segments
- Discover high-value customers and analyze their behavior
- Evaluate product performance (sales & profit)
- Assess operational factors impact on profitability
- Support data-driven decision making

[37]: df['Status'].fillna("Pending",inplace=True)
```

C:\Users\ALasad\AppData\Local\Temp\ipykernel_2276\334487746.py:1: FutureWarning: A value is trying to be set on a copy of a DataFrame or Series through chained assignment using an inplace method.
The behavior will change in pandas 3.0. This inplace method will never work because the intermediate object on which we are setting values always behaves as a copy.

For example, when doing 'df[col].method(value, inplace=True)', try using 'df.method({col: value}, inplace=True)' or df[col] = df[col].method(value) instead, to perform the operation inplace on the original object.

```
df['Status'].fillna("Pending",inplace=True)
```

```
[38]: df
```
